Shutter Priority (Tv)	ISO Shutter Aperture	set by photographer set by photographer set by camera

ISO auto

Exposure triangle

Why use

Manual

Total control

Program Mode

Just for the record, part of the learning curve, pre-checking, too easy not to use and 'I can correct in Photoshop'

Av

Depth of field, subject isolation, 3 dimensional effect, Landscape interest range

Tv

Camera shake prevention, blur introduction, Panning, freeze of action

Exposure triangle

Why choose

Shutter

subject movement
deliberate blur
camera shake
studio flash

Aperture

depth of focus
blur foreground
blur background
blur foreground and background
studio flash

ISO

enable setting of aperture and shutter setting required
enable use of ND filters
studio flash

This photo uses the chosen shutter speed to

- illustrate movement,
- illustrate freeze
- illustrate blur
- illustrate panning

What mode did I use?
What settings did I use

Background
people and cars
blurred

Car body frozen and
Relatively sharp

Vertical suspension
Movement blurred

Wheel rotation
blurred

Road surface
blurred

Camera Information

Make: Canon

Model: Canon EOS 7D; S/N: 1580814706

Owner: Colin J Hicks

Lens: 18-50mm

Shot Information

Focal Length: 50.00 mm

Exposure: 1/100 sec; f/11; ISO 200; Shutter priority; Pattern
metering

Image Size: 5184 x 3456

Orientation: 1 (Normal)

Resolution:

Flash: Did not fire

→ Lens wide angle zoom

→ 18mm-50mm

f2.8 –f22 set at 50mm

→ Exposure: shutter priority

ISO 200

Shutter 1/100th sec

Aperture f11

Pattern metering

Rail post and Grass blurred
Due to panning

Background blurred due to
panning and differential focus

Hoof and fetlock blurred
Due to shutter speed

What setting did I use?

What shutter speed is being used?

I used the first two races to experiment with settings. Raised ISO to ensure fast Shutter and moderate aperture

Exposure triangle

Why choose

Shutter

subject movement
deliberate blur
camera shake
studio flash

Aperture

depth of focus
blur foreground
blur background
blur foreground and background
studio flash

ISO

enable setting of aperture and shutter setting required
enable use of ND filters
studio flash

In focus part of Subject is in the foreground

Light is coming thro the window

Face has rim lighting on the forehead and cheekbone

Internal background slightly out of focus

External background moderately out of focus but recognisable

Photographer has white shirt lifting the shadows

This image not Photoshopped (final image cropped to head and shoulders)

Aperture priority/Low ISO

Original scan from a 35mm monochrome negative
Kodak RoyalX Pan rate at ISO 3000

Taken from the pavement on Bourbon Street in
New Orleans

Hand held, No flash

Manual mode + exposure Bracketing

50mm lens F1.8 shutter 30th sec

Exposure triangle

Examples of other modes

Sports higher shutter speed/wider aperture/high ISO

Portrait moderate shutter speed/moderate aperture/Low ISO

Landscape Small aperture/lower shutter speed/low ISO

Night/Lowlight merges multiple exposures large aperture/slow shutter/
High iso

Mono pre-view (if happy take it in colour and post process)

Why are we concerned with depth of focus

- There are 2 basic ways that depth of focus is used in photography
 - Out of focus foregrounds and backgrounds make the subject stand out
 - (Shallow depth of focus)
 - Crisp focus from foreground to infinity for landscapes
 - (maximum depth of field)
 - In addition macro photography requires extreme measures and careful consideration
- 3 examples of differing depth of focus

What is depth of focus

- Depth of focus is the distance from the closest part of the picture to the most distant part of the picture that is acceptably sharp.

What is depth of focus

- Depth of focus is the distance from the closest part of the picture to the most distant part of the picture that is acceptably sharp.

medium depth of focus

What is depth of focus

- Depth of focus is the distance from the closest part of the picture to the most distant part of the picture that is acceptably sharp.

Small (shallow) depth of focus

The 3 items that influence what is in focus

Lens Aperture

Point of Focus

Focal Length

Lens Aperture

The aperture is the most useful control of depth of focus

Point of Focus

The closer that you are to the subject the less depth of field there is.

Focal length
